

POWER BI DASHBOARDS VS REPORTS

Definitions

Report: A Power BI report offers a multi-perspective view into a dataset with various visuals (charts, texts, values) to show different insights. Reports are more detailed than dashboards and allow users to drill down and filter data based on specific criteria.

Dashboard: Power BI Dashboard uses visualisations to narrate a compelling story by highlighting the most important insights across datasets, usually centred around key performance indicators (KPIs).

Features	Dashboards	Reports
Pages	One Page	Multiple Pages
Filtering	No	Yes
Power BI Desktop	No	Yes
Root Data View	No	Yes
User Subscription	Yes	Yes
Data Source	Multiple Data Sets	One Data Set
Alerts	Yes	No
Natural language Queries	Yes	No
Favourites	Yes	Yes
Publish to Web	No	Yes

Whether you need a quick overview with a dashboard or a deep dive with a report, Power BI provides the flexibility and power to meet your data analysis needs.
